PROFESSIONAL SUMMARY

AWS DevOps Engineer with **3+ years of experience** in designing, automating, and managing **highly available cloud infrastructure on AWS**. Expertise in **Terraform (IaC)**, **GitHub Actions CI/CD**, **Docker**, **Amazon EKS**, **Kubernetes**, **Prometheus**, **Grafana**, and **cloud networking**. Proven track record in building **multi-tier, multi-region platforms** and serverless deployment pipelines that **reduced deployment time by 70%+** while maintaining **99.9% uptime**. Passionate about **infrastructure automation** and delivering reliable, scalable systems.

TECHNICAL SKILLS

Cloud & IaC : AWS (EKS, ECR, EC2, VPC, S3, RDS, IAM, ALB, Auto Scaling, CloudFront, Route 53, WAF, ACM, SNS, Textract, Rekognition, Lex), Terraform (Modules, Workspaces, S3 Backend + State Locking), GitHub Actions CI/CD

Containers & Orchestration : Docker, Kubernetes (EKS, Deployments, Services, Ingress, HPA), Amazon EKS, Amazon ECR

Monitoring & Observability : Prometheus, Grafana, CloudWatch, AppDynamics, Alertmanager

Scripting & Version control : Bash/Shell Scripting, Git, GitHub

Databases : Oracle SQL, MySQL

Operating Systems : Linux, Unix, Stratus VOS

Tools & Collaboration : JIRA, Confluence

Mainframe & Legacy Systems : Mainframe/COBOL (Transaction Processing, Screen Maps), IBM DB2, File Processing, Operational Monitoring, Logging Mechanisms

PROFESSIONAL EXPERIENCE

AWS DevOps Engineer

Aug 2025 – Present

Vcube Software Solutions

Hyderabad, India

Project: Production-Ready Multi-Region 3-Tier AWS Platform (Terraform + CI/CD)

Tech Stack: AWS, Terraform (IaC), GitHub Actions, CI/CD, VPC, EC2, ASG, ALB, Multi-AZ, S3 Remote Backend, Cloud Networking, Linux

GitHub: <https://github.com/rajoli-girisai-madhav/aws-3tier-multi-region-terraform-platform>

- Designed a **multi-tier AWS architecture** using **Terraform**, enabling multi-region deployments across multi-AZ environments, ensuring fault tolerance and **99.9% uptime**.
- Built **CI/CD pipelines** using **GitHub Actions matrix strategy**, automating deployments across dev, QA, and production environments with structured validation workflows.
- Reduced deployment time by 70%+** (under 15 minutes) through Infrastructure as Code (IaC), eliminating manual provisioning delays and improving delivery efficiency.
- Introduced **approval-based deployment controls** enhancing release governance, reducing production risks, and strengthening compliance across enterprise deployment workflows.
- Engineered AWS networking architecture including **VPC, subnets, route tables, and security groups**, enabling scalable compute using EC2, Auto Scaling Groups (ASG), and ALB.
- Implemented **S3 remote state management with locking mechanisms**, reducing configuration conflicts by **60%** and improving collaboration across engineering teams.
- Enabled **centralized logging and monitoring** improving system visibility, debugging efficiency, and proactive incident detection across environments.

Project: Serverless CI/CD Pipeline for React Application (S3, Route 53, CloudFront, ACM & WAF)

Tech Stack: AWS, GitHub Actions, CI/CD, Amazon S3, CloudFront, Route 53, AWS Certificate Manager (ACM), AWS WAF, AWS CLI, React, Serverless Hosting, DNS Management

GitHub: <https://github.com/rajoli-girisai-madhav/react-aws-devops-portfolio>

- Built a fully automated **CI/CD pipeline** using **GitHub Actions**, enabling continuous build, test, and deployment workflows for frontend React applications.
- Hosted the application on **Amazon S3 integrated with CloudFront CDN**, ensuring scalable global content delivery with low-latency access.
- Configured **Route 53 domain routing** with custom domain mapping, enabling reliable traffic routing and production-grade DNS resolution.
- Enforced **HTTPS encryption using AWS Certificate Manager (ACM)**, securing application communication across edge and origin layers.
- Strengthened application security using **AWS WAF rules**, preventing unauthorized access attempts and protecting application endpoints.
- Automated deployments using **AWS CLI (S3 sync)** with version-controlled artifacts, ensuring consistent, repeatable, and traceable release processes.
- Implemented a **CloudFront cache invalidation strategy**, ensuring immediate propagation of updates without stale content delivery.

Project: Production-Grade Application Deployment and Monitoring Platform on AWS EKS using Docker, ECR, Prometheus, Grafana, and GitHub Actions

Tech Stack: Amazon EKS, Amazon ECR, Docker, Kubernetes, GitHub Actions, Prometheus, Grafana, HPA, Ingress, AWS Load Balancer Controller

GitHub: <https://github.com/rajoli-girisai-madhav/aws-eks-docker-ecr-prometheus-grafana-platform>

- Designed and deployed a **containerized application platform** on **Amazon EKS** using **Docker** and **Amazon ECR**.
- Built automated **CI/CD pipelines** using **GitHub Actions** for container image build, versioning, and deployment workflows.
- Implemented **Kubernetes Deployments, Services, and Ingress** resources for scalable and highly available workload management.
- Integrated **Prometheus** for infrastructure and application metrics collection across Kubernetes workloads and cluster resources.
- Developed **Grafana dashboards** providing **100% visibility across cluster nodes, pods, deployments, and workloads**.
- Configured **Horizontal Pod Autoscaling (HPA)** and health checks to improve application resilience, scalability, and self-healing capabilities.
- Implemented proactive monitoring and alerting for **CPU, memory, pod health, and service availability**, improving operational visibility and troubleshooting efficiency.

Info Tech Senior Associate

NTT Data

May 2022 – Dec 2024

Bangalore, India

- Automated operational workflows using **Bash/Shell scripting**, improving execution efficiency and reducing repetitive manual tasks.
- Built and maintained monitoring and alerting systems using **AppDynamics**, enabling proactive anomaly detection and faster incident response.
- Managed **high-volume production transaction systems** ensuring **99.9% uptime** across mission-critical enterprise workloads.
- Reduced incident resolution time by **25–30%** through structured **Root Cause Analysis (RCA)**, debugging, and proactive operational support.
- Ensured compliance with **Visa/MasterCard financial regulations**, maintaining secure and reliable transaction processing standards.
- Improved system stability, performance visibility, and operational reliability through continuous **production monitoring and observability** practices.

PROFESSIONAL HIGHLIGHTS

- **Cloud Infrastructure & Automation:** Experienced in building highly available AWS infrastructure using Terraform, CI/CD automation, and cloud-native deployment workflows.
- **Production Operations:** Strong background in production operations, monitoring, and incident management across enterprise-scale systems.
- **Architecture Design:** Skilled in designing scalable multi-tier cloud architectures with a sharp focus on reliability, automation, and operational efficiency.

- **Networking & Security:** Hands-on experience with cloud networking, security controls, and deployment governance across distributed environments.
- **Containerization & Kubernetes:** Hands-on experience with Docker, Amazon EKS, Kubernetes deployments, observability, auto-scaling, and containerized application delivery pipelines.

CERTIFICATIONS & ACCOMPLISHMENTS

- Mainframe Application Developer – NTT DATA
- Financial Systems Certification – NTT DATA
- SQL (Intermediate) – HackerRank
- Performance Excellence Award – 100% SLA compliance

EDUCATION

S.V. College of Engineering

Bachelor of Technology (B.Tech) – Electrical and Electronics Engineering

Sep 2017 – Aug 2021

Kadapa, India
